## 998002 EasyComm 3000 Speech Enhancement System

The EasyComm 3000 is the fourth generation Speech Enhancement system from Claude Systems. Designed for Security Screen usage in a range of environments, the system has many new features.

The EasyComm Speech Enhancement systems were designed to meet the needs of clients who have a Glazed Screen to protect their staff. The Glazed screen prevents clear speech between clients and staff because of the physical barrier present; the system provides the ability for clients and staff to clearly communicate as if the Glazed screen were not present.

The EasyComm system has a patented circuit that is designed to reduce the likelihood of acoustic feedback, something that affects speaker/microphones in close proximity.

The EasyComm system provides a solution to everyday communication issues.

### FEATURES

Independently Adjustable Gain Controls for both Staff and Client side, give the unit maximum flexibility in a range of Audio Environments. All cable connections are made on a single face of the unit, adding flexibility and further simplifying installation.

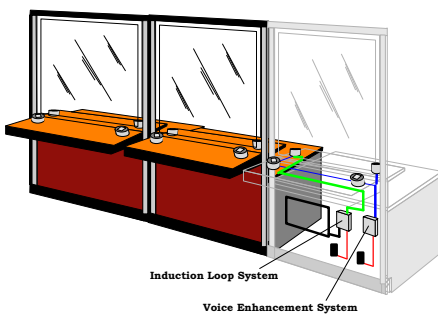

- 5 Year Warranty
- Multiple Configuration Options
- Minimal User Intervention required
- On/Off Operation
- Direct Induction Loop Signal Output
- "Push To Talk" facility
- Low cost of ownership
- Compact Design
- Integration with Claude's "Audio Cash Tray" - optional
- Stainless Client POD's (Microphone/Speaker) - optional
- Combined Microphone/Speaker option for Staff side - optional
- All connections on rear Panel for installation ease
