

Claude Systems Ltd Induction Loop - Voice Enhancement – Safety Alert Systems

Claude Systems is a Scottish based company, located in Fife, operating throughout the UK and Ireland, dedicated to the aim of clear audio communications for all, in offices, public places or auditoriums.

The Company successfully designs, manufacturers and installs a range of audio equipment, from Induction Loop Systems, both fixed and portable, through to Voice Enhancement Systems for glass security screens. Typical major users are Banks, Building Societies, Bureau de Change, Retailers and Government Offices

Our aim is to continue to be the technological market leader in our industry. Claude Systems Ltd has taken an approach by using our unique patented technology; to reduce the onset of feedback, ensuring an unmatched quality of sound, even through security glass or in busy locations

Our Induction Loop Systems offer unrivalled speech enhancement without discrimination for the hearing aid user. Equipment ranges from portable loops for small meeting environments, to fixed loops for reception areas and more open venues. We also supply and install room loops for meeting rooms and conference halls.

Our Safety Alert system, connected to the buildings main fire alarm, allow our clients peace of mind by being able to issue pocket receivers (dedicated “pagers”) to those with hearing impairments. The system incorporates the means to transmit pre-set text messages in the event of an alarm being activated

Our latest technology increases the level of communications, which provides improved volumes and intelligibility without compromising privacy and security.

The team at Claude Systems Ltd are available to offer advice and assistance on any project and assure you of our continued interest and best attention at all times.
